

Kneron KL720 SDK v2.0.0

Features:

- Open model pre/process flow for customized model implementation
- Support new model file format for variant model capacity
- Provide MIPI input, UART output solution example
- [utils] provide JLink programmer quick scripts

Changes:

- Refactored with new frame buffer architecture for hico_mipi/host_mipi solution examples
- Removed dummy folder/files

Bug Fixes:

- Fixed internal DMA copy failure over 4MB in size
- Fixed potential feasibility issue
- Fixed some bugs

Limitations:

- Built-in preprocess doesn't support 4-channel data
- Build-in preprocess must satisfy result resolution $W < 1023$ and $H < 2047$
